ResiLute™ Resin Cement – Pulpdent

Multi Purpose Resin Cement

ResiLute is an exceptionally strong dual cure resin cement with fluoride release and a very low film thickness of 15 microns. It is used for permanent cementation of all metal castings, for indirect ceramic and composite restorations, such as laminate veneers, inlays, onlays and crowns, and for bonded amalgam restorations.

ResiLute is designed so that oxygen inhibition provides a long working time on the mixing pad. Once ResiLute is placed under the restoration in the mouth, it can be light cured on demand, or it will self-cure in 6 minutes.

Place OxOut oxygen inhibiting gel over ResiLute to cure it at the margins.

ResiLute is radiopaque and is available in both universal and clear shades.

4gm of base and 4gm of catalyst.

Implant Cement™ – Premier Dental Products Designed for Implants, Perfect for Temporaries

Premier Dental Products Implant Cement is a noneugenol, resin-based cement for implant-retained restorations and provisionals when retention is as important as retrievability

- High retention eliminates patient recalls for re-cementation
- Easily retrievable when needed
- Low solubility with good marginal seal
- Initial gel-phase in 2.5 minutes for easy removal of excess cement
- Rigid, final set for excellent marginal seal and firm retention
- Automix syringe saves time
- Aesthetic gingival shading for natural appearance
- Virtually no taste or odour for increased patient comfort

ZONE Temporary Cement – Dux

Available in Three Delivery Systems: Dual Syringe, Unit Dose and Tubes

Compatible with all provisional materials. It will not soften, craze, or discolour acrylic or polycarbonate crowns. ZONE Temporary Cement is kind to the pulp and tissue, and will not decalcify dentin (as does a ZOE cement). ZONE Temporary Cement has a 30-second mix time and a 2-minute working time. This hard-setting, crystalline cement assures consistent superior retention, yet permits easy removal and cleanup.
